

coflex CD

COFLEX CD mortar bed movement joints in co-extruded synthetic resin are conceived to subdivide large tile bays. Extension clips may be vertically interlocked to match high thicker mortar beds. Exclusively suitable for pedestrian traffic, this profile provides limited protection to the tile edges and compensates slight differential movement due to substrate contraction and expansion. They are installed with thin-set mortar. Ideally used in retail shops, hotels, sports facilities and schools. Suggested floor bays: 172-7/32"ft2 (16m2).

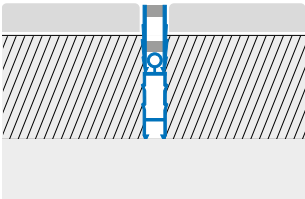

CD230P10 + CD220P

Length: 2,70 meters

Coextruded Synthetic Resinil + Resinflex

B = 8 mm
