coflex CTL

COFLEX CTL expansion joints are composed of a metal structure and a flexible yet durable central infill that can be ground and polished on-site. Due to their resistance to corrosion and wear, the profiles are ideal for stone tile installations in industrial and commercial settings. The metal angle profile protects vulnerable tile edges against mechanical stress that can cause chipping and cracking; the metal flanges absorb and redistribute loads, material compression and expansion. Ideally used in retail shops, hotels, sports facilities and schools.

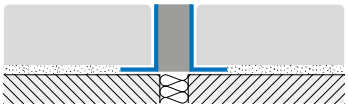

CTL100AN51

Length: 2,70 meters

Stainless Steel - Aluminum - Brass + suitable for grinding insert in EPDM
