

plano PPS130

PPS130 aluminum profile.

Innovative and unique, the PPS130 profile represents a high-quality finishing solution for plasterboard applications. It combines functionality and aesthetics, enhancing any residential or commercial space. Thanks to its 13 mm cross-section, it integrates perfectly with the thickness of the most common plasterboard panels. It can be used as an elegant decorative element with LED strips at baseboard level, as a wall marker, or to illuminate ceiling perimeters, in line with the latest architectural design trends. The base acts as a joint cover, also ideal for wooden floors, while the front panel conceals the LED strip, creating a refined play of light and shadow that enhances any space.

PPS130AS

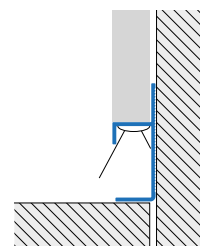

Aluminum

H1 = 39,5 mm

B = 26,5 mm

Length: 2,70 meters

It is recommended to use FIXXTEC multipurpose adhesive to bond the product. For further information, see page 368.
