

trimtec SR

TRIMTEC SR is recommended in particular for finishing the edges of the perimeter of the ceramic floors, especially where they abut to vertical covering, or as stair nosing, as well as for trimming external access ways and balconies. SR trim has an extended vertical edge which serves to better cover and protect the joining surfaces or paint finishing as well as to prevent future fissuring. Its particular section design makes it suitable to match two different floor thicknesses with the same reversible profile. The aluminum section is designed with vertical dovetail anchoring.
