

trimtec TR

TRIMTEC TR is a complete range of brass, aluminum and stainless steel trim profiles designed for fast and efficient installation of any flooring type, regardless of size and thickness. TRIMTEC TR is available in various heights from 2 to 30 mm, matching different tile thicknesses. In the aluminum and brass versions, a dovetail groove maximizes the grout grip and edge protection for both vertical and horizontal tile laying. TRIMTEC TR profiles are conceived for tile laying, but can also be used with other types of flooring such as stone, wood and industrial resin floors. TRIMTEC TR profiles are mainly used as transition trims between two types of flooring (for example between tiling and carpeting) and as expansion joints when two lengths are laid side by side. They can also be used as trimming for ceramic baseboards and as edge protection for any floor thickness. In some cases the profiles may be used as entrance mat framing.
